

שינויים

sequence & collaboration workers:

We added the following objects:

- StockKeeperController
- StoreManagerController
- SupplierManagerController
- StockKeeper
- StoreManager
- SupplierManager

Object Diagram:

- union both object diagram with new story.
- adding all new objects

Use-case supplier description updates:

- In the main case scenario, we updated that the data is persisted in the database.
- In the alternatives we emphasized that the use case is automatic thus there is no alternative flow, but a message to the user in case of failure.

ERD:

- Typo was fixed.
- The order man was deleted, because of integration.

Service layer and presentation layer in the class diagram:

- We merged the two modules in those modules by adding cli per job which integrated in the design pattern of the employee transport module.
